

Lupo®

Lupo® is a new air positioning system.

Lupo® has been developed for the following applications:

- Exhaust air ducts with Airflow velocities of 10 – 22 m/sec.
- Cooling lubricant concentration < 400 mg/m³
Particles ≤ 400 μm
- Gas phase concentration < 1000 mg/m³
- Static pressure < 50 mbar!

Lupo® does not require an inlet section

- robust measurement (low contamination)
- almost without pressure loss
- Installation into the extraction pipe horizontally or vertically

Lupo can do more:

- Temperature sensor
- Automatic exhaust air flap
- Damper, (manually adjustable)
- Volume flow measurement
- Volume flow display (digital option)
- Minimum pressure monitor (-5 to -20 mbar)

Equipment options:

- 2 pressure cells
- Pressure sensor
- Volume flow display
- Volume flow regulation
- Motor actuator
- Pneumatic flap

... and also for the machine manufacturer!
